

EventForce Management System

Phase 3: UI/UX Development and Customization

Updated 5 October 2026 | Team SWUID-2026-379743

KSK College of Engineering and Technology | College code: 8210

Team: Srinivasan J, Harish V and Subikshan C

Application and navigation

We created the EventForce Lightning app with Events, Clients, Vendors, Venues, Feedbacks, Reports and Dashboards. Five custom object tabs use distinct icons. The implementation uses the EventForce app name for the team presentation.

Record interaction

Related client and venue fields keep event details together. Submit for Approval was added to the Event page layout and verified in the Lightning action menu. Record pages and approval history support the cancellation demonstration.

Report configuration

Upcoming Events by Month uses all events in the next 30 days except Canceled, groups by calendar month and summarizes record count and budget. Results change with the current date and record permissions.

Dashboard and review

EventForce Operations Dashboard uses a donut chart from the monthly report, a light widget theme and the subtitle Upcoming Events Overview. Screenshots show the saved interface. No separate mobile usability study is claimed.

The application screenshots below were captured directly from our dedicated playful-unicorn playground on 5 October 2026. They show saved sample records, not mockups. At capture time the report contained nine records with a total formula budget of 285,000. Counts vary with date, filters and record access.
